

Abdiaziz Mohamed Abdi

PETROLEUM ENGINEER (MSc) · DRILLING & WELL OPERATIONS · HSE

Doha, Qatar **Transferable QID · available immediately** anwernuur@gmail.com +974 3349 3961

[linkedin.com/in/abdiaziz-petroleum](https://www.linkedin.com/in/abdiaziz-petroleum) [Portfolio](#)

Petroleum engineer (MSc, Honours) based in Doha. IWCF well control, OPITO BOSIET with EBS, H2S and NEBOSH certified, seeking a wellsite or trainee drilling engineer seat on rotation. Field record: a complete borehole campaign at a remote, camp-based site in Somalia, covering set-out and verticality control, casing and screen installation with no alignment defects, and yield verified at 22 litres/second against a 16-hour pump window. MSc research on hydraulic-fracturing optimisation through microseismic monitoring, with Petrel and cementing work. Transferable Qatar ID, no sponsorship required, available immediately and open to 28/28 rotation.

EXPERIENCE

Assistant Drilling Intern — Borehole & Water Supply

On-Site Well Drilling Projects · Somalia Nov 2022 – Feb 2023

- Verified an 8-inch borehole's 22 litres/second yield against peak demand inside a 16-hour pump window — 8 hours of daily spare capacity for outages and growth.
- Set out the borehole and reservoir and checked verticality and elevation through drilling and construction, catching alignment error before casing and screen installation.
- Set reservoir capacity at 50 m³ against a computed 36.3 m³ requirement, buying ~38% surge headroom on a standard masonry design instead of a costlier custom pour.
- Controlled the project's biggest cost line — pipes at over 70% of total investment — running the quantity survey and specifying galvanized iron for the rising main, high-density polyethylene for distribution.
- Delivered piped water to 1,900+ residents and 850+ livestock previously drawing from open ponds and distant springs.

Research Assistant — Hydraulic Fracturing

Cyprus International University Feb 2024 – Jun 2025

- MSc thesis on optimising hydraulic fracturing through microseismic monitoring, validated against two field case studies.
- Applied machine-learning methods to microseismic event detection, localisation and noise suppression.
- Built proficiency in Petrel for reservoir modelling and cementing operations.

Geology & Geophysics Intern

Cyprus Geological Survey · Nicosia, Cyprus Aug – Oct 2022

- Delivered depth-to-bedrock profiles across 4 construction sites, giving foundation designers a continuous ground model along each line instead of interpolation between boreholes.
- Picked first arrivals on 25 refraction spreads shot forward, reverse and offset on a 24-channel layout, resolving overburden thickness and weathered-layer velocity.
- Cut noise-rejected records by stacking repeat hammer blows at each shot point, with no return trip to re-shoot.

EDUCATION

MSc Petroleum & Natural Gas Engineering

Cyprus International University · 2025

CERTIFICATIONS

- IWCF Well Control
- NEBOSH General International Certificate
- OPITO BOSIET with EBS
- OPITO H2S Basic (9014)
- Rigging & Lifting Equipment

All current; verification on request.

SKILLS

Technical

Well planning & drilling programme fundamentals · borehole drilling and completion (set-out, verticality control, casing and screen installation) · drilling fluids and cementing · well control (IWCF) · pump and yield testing · microseismic monitoring & formation evaluation · quantity surveying and cost control · Petrel, Landmark, AutoCAD

Professional

Site crew coordination · toolbox talks and safety briefings (NEBOSH-trained) · technical reporting and documentation · decision-making under schedule and supply constraints · problem-solving with limited resources · client and community liaison in English, Arabic (fluent) and Somali (native)

PROJECTS

Downhole permeability sensor

Built a working 12-inch prototype measuring permeability in-well.

Cement sheath integrity (HPHT)

Acoustic integrity testing under HPHT loading; 12 sensors, 3 planes.
