

Abdiaziz Mohamed Abdi

PETROLEUM ENGINEER (MSc) · DRILLING & WELL OPERATIONS · HSE

Doha, Qatar **Transferable QID · available immediately** anwernuur@gmail.com +974 3349 3961

[linkedin.com/in/abdiaziz-petroleum](https://www.linkedin.com/in/abdiaziz-petroleum) [Portfolio](#)

Petroleum engineer (MSc, Honours) based in Doha, specialising in drilling operations, wellsite coordination and well control. Field record: a live 90-day spud-to-TD campaign in Somalia with a zero-incident safety record, mud system parameters held within $\pm 2\%$ of spec, and 90+ daily drilling reports delivered with zero data-continuity gaps across 3 crew rotations. IWCF well control, NEBOSH, OPITO BOSIET with EBS and H2S certified. Transferable Qatar ID, no sponsorship required, available immediately for field engineering and drilling roles across Saudi Arabia, Qatar and the wider MENA region.

EXPERIENCE

Petroleum Engineering Intern — Drilling Operations

On-Site Well Drilling Projects · Somalia Nov 2022 – Feb 2023

- Sustained a 100% zero-incident safety record across ~90 operational days on a remote, camp-based crew, participating in toolbox talks and site HSE protocols.
- Set out the borehole and reservoir and checked verticality and elevation through drilling and construction, catching an alignment error before casing and screen installation.
- Supported casing and screen installation and a primary cement job, including quantity and capacity calculations, with no alignment defects on completion.
- Verified an 8-inch borehole's 22 litres/second yield against peak demand inside a 16-hour pump window, leaving 8 hours of daily spare capacity for outages and growth.
- Delivered 90+ daily site reports across the campaign with zero data-continuity gaps, cutting shift-start delays by an estimated 15%.
- Delivered piped water to 1,900+ residents and 850+ livestock previously drawing from open ponds and distant springs.

Research Assistant — Hydraulic Fracturing

Cyprus International University Feb 2024 – Jun 2025

- MSc thesis on optimising hydraulic fracturing through microseismic monitoring, validated against two field case studies.
- Applied machine-learning methods to microseismic event detection, localisation and noise suppression.
- Built proficiency in Petrel for reservoir modelling and cementing operations.

Geology & Geophysics Intern

Cyprus Geological Survey · Nicosia, Cyprus Aug – Oct 2022

- Delivered depth-to-bedrock profiles across 4 construction sites, giving foundation designers a continuous ground model along each line instead of interpolation between boreholes.
- Picked first arrivals on 25 refraction spreads shot forward, reverse and offset on a 24-channel layout, resolving overburden thickness and weathered-layer velocity.
- Cut noise-rejected records by stacking repeat hammer blows at each shot point, with no return trip to re-shoot.

EDUCATION

MSc Petroleum & Natural Gas Engineering

Cyprus International University · 2025

CERTIFICATIONS

- IWCF Well Control
- NEBOSH General International Certificate
- OPITO BOSIET with EBS
- OPITO H2S Basic (9014)
- Rigging & Lifting Equipment

All current; verification on request.

SKILLS

Technical

Drilling operations and wellsite coordination · mud system and fluid parameter control · well control (IWCF) and blowout preventer function testing · real-time wellbore parameter monitoring · daily drilling and mud reporting · casing running and primary cementing support · Petrel, Landmark, AutoCAD

Professional

Rig crew coordination on 12-hour tours · toolbox talks and job safety analyses (NEBOSH-trained) · handover documentation across crew rotations · decision-making under schedule and supply constraints · client and community liaison in English, Arabic (fluent) and Somali (native)

PROJECTS

Downhole permeability sensor

Built a working 12-inch prototype measuring permeability in-well.

Cement sheath integrity (HPHT)

Acoustic integrity testing under HPHT loading; 12 sensors, 3 planes.
