

Abdiaziz Mohamed Abdi

PETROLEUM ENGINEER (MSC) · DRILLING & WELL OPERATIONS · HSE

Doha, Qatar **Transferable QID · available immediately** anwernuur@gmail.com +974 3349 3961

[linkedin.com/in/abdiaziz-petroleum](#) [Portfolio](#)

Petroleum engineer (MSc, Honours) in Doha with a 90-day, zero-incident remote drilling campaign in Somalia covering casing, cementing and pump testing. IWCF, NEBOSH, OPITO BOSIET with EBS and H2S certified. Transferable Qatar ID, no sponsorship required; available now for field and drilling roles across Qatar, Saudi Arabia and MENA.

PROFESSIONAL EXPERIENCE

Cyprus International University
Research Assistant | Hydraulic Fracturing, Microseismic Monitoring, Well-Test Analysis, Machine Learning

Nicosia, Cyprus
Feb 2024 – Jun 2025

- Analysed 109 fracturing jobs, showing complex fracture networks produced 1.9× more oil for 2.45× longer.
- Compared fracture design against well-test data, exposing a 5× underestimate on a well recovering 17.7% vs 4.9% OIIP.
- Reviewed ML for microseismic detection and denoising, producing 6 field recommendations in a defended MSc thesis.

On-Site Well Drilling Projects
Drilling Operations Intern | Well Construction, Cementing, Pump Testing, HSE

Somalia
Nov 2022 – Feb 2023

- Maintained a zero-incident record over ~90 days on a remote crew through toolbox talks and HSE protocols.
- Set out the borehole and checked verticality and elevation through drilling, catching an alignment error before casing.
- Supported casing, screen and a primary cement job with quantity calculations, finishing with zero alignment defects.
- Verified an 8-inch borehole's 22 L/s yield within a 16-hour pump window, leaving 8 hours of daily spare capacity.
- Delivered 90+ daily site reports with zero data gaps, cutting shift-start delays by an estimated 15%.

Geological Survey Department
Geology and Geophysics Intern | Seismic Refraction, Ground Modelling, 24-Channel Seismograph

Nicosia, Cyprus
Aug 2022 – Oct 2022

- Delivered depth-to-bedrock profiles for 4 construction sites, giving foundation designers a continuous ground model.
- Picked first arrivals on 25 refraction spreads with a 24-channel layout, resolving overburden thickness and velocity.
- Stacked repeat hammer blows at each shot point, cutting noise-rejected records and avoiding return trips to re-shoot.
- Kept equipment downtime below 5% through routine monitoring and field maintenance.

PROJECTS

Downhole Sensor for Real-Time Permeability Measurement
Senior Design Project | Downhole Tool Design, CAD, Prototyping, Arduino

Nicosia, Cyprus
Sep 2024 – Jan 2025

- Built a 12-inch downhole prototype that anchors to the well wall, drills into rock and reads pressure and flow.
- Added linear bearings to the drill motor housing, stopping drill wander under torque and holding a straight path.
- Integrated 5 subsystems with Arduino control to stabilise, drill, measure and retract in one automatic cycle.

Cement Sheath Integrity Under HPHT Conditions
Laboratory Research Project | Well Integrity, HPHT Testing, Acoustic Monitoring, Autolab 3000

Nicosia, Cyprus
Feb 2024 – Jun 2024

- Tested cement sheath integrity on an Autolab 3000 HPHT system, measuring shear bond strength of 0.447–1.470 MPa.
- Showed raising confining pressure from 10 to 25 MPa cut acoustic travel time 10.86% and lifted amplitude 32%.
- Found a 66.4°C rise cut amplitude 20.5% via microcracking, and casing pressure did not improve bond strength.

Community Water Well Construction
Volunteer Engineer | Well Construction, Casing Installation, Pump Testing, HSE

Somalia
Jan 2023 – Feb 2023

- Delivered 2 community water wells from spud to commissioning in 6 weeks, giving 500+ residents access to clean water.
- Ran casing installation, pump testing and wellhead assembly, with zero structural failures after commissioning.
- Ran HSE, soil and contamination checks across all field work, confirming drinkable water at both sites.

EDUCATION

Cyprus International University, M.Sc. in Petroleum & Natural Gas Engineering, Honours
Relevant Coursework: Drilling Engineering, Well Operations, Formation Evaluation
Member: Society of Petroleum Engineers (SPE) International

Feb 2023 – Jun 2025

Cyprus International University, B.Sc. in Petroleum & Natural Gas Engineering, Honor List
Relevant Coursework: Drilling Operations, Reservoir Engineering, Well Monitoring

2018 – 2022

CERTIFICATIONS & SKILLS

Certifications: IWCF Well Control · NEBOSH IGC · OPITO BOSIET with EBS · OPITO H2S Basic (9014) · Rigging & Lifting
Technical: Borehole drilling and site supervision · casing, screen and cementing support · well control (IWCF) · pump testing · hydraulic fracturing and microseismic analysis · downhole tool design · Petrel, Landmark, AutoCAD, Arduino
Professional: Crew coordination on 12-hour shifts · toolbox talks and JSAs · English, Arabic (fluent), Somali (native)
